

YOUR IT PARTNERS FOR BEAUTY & WELLBEING

Running a hairdressers, massage parlour, health spa or wellbeing centre throws up all kinds of challenges, from managing appointments to protecting client data.

Linten offer specialised IT services for businesses in the beauty and wellbeing sector – enhancing communications, connectivity and security across the board. Our experts deliver solutions that will put you a cut above the competition.

Who we are

The way in which you communicate with clients will shape their perception of your beauty business. To create the best possible impression, you need to have an organised, fluid, dependable system in place.

We work with leading beauty and wellbeing software providers to streamline your communications, so you can easily manage contacts, bookings, emails and calendars.

Connectivity

Your customers want to be connected wherever they are. Social wifi enables you to add value to your clientele, allowing them to access the internet through their social media accounts in exchange for their contact details.

Linten can install and maintain a strong, dependable social Wi-Fi connection, so you can grow your database and keep customers happy.

Security

Data protection should always be top of your priority list. Every name, number and address that goes into your system must be taken care of.

Linten will keep your client information safe and secure. Hiding these delicate details from prying eyes is pivotal – and we also go one further by supplying data backup solutions for total peace of mind.

Support

Integrating an effective IT system puts you in the best possible position to take your beauty business to the next level.

But Linten don't just install, incorporate and improve systems; we offer proactive support, too. We get to know your brand and work alongside you to craft solutions that work best for your circumstances.
